class starts @ 9:04pm

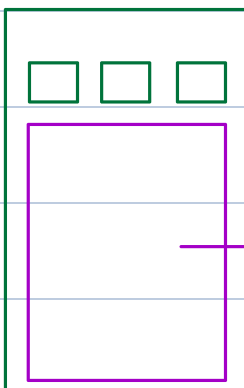

Announcement: In case of pager → 2 mins

Case study

Zepto → mobile and web App

You are hired as a Data Engineer.

1. You are asked to track each user click to understand patterns and to optimize your home page

[Fast moving, time, area, profile]
Real estate they want to optimize

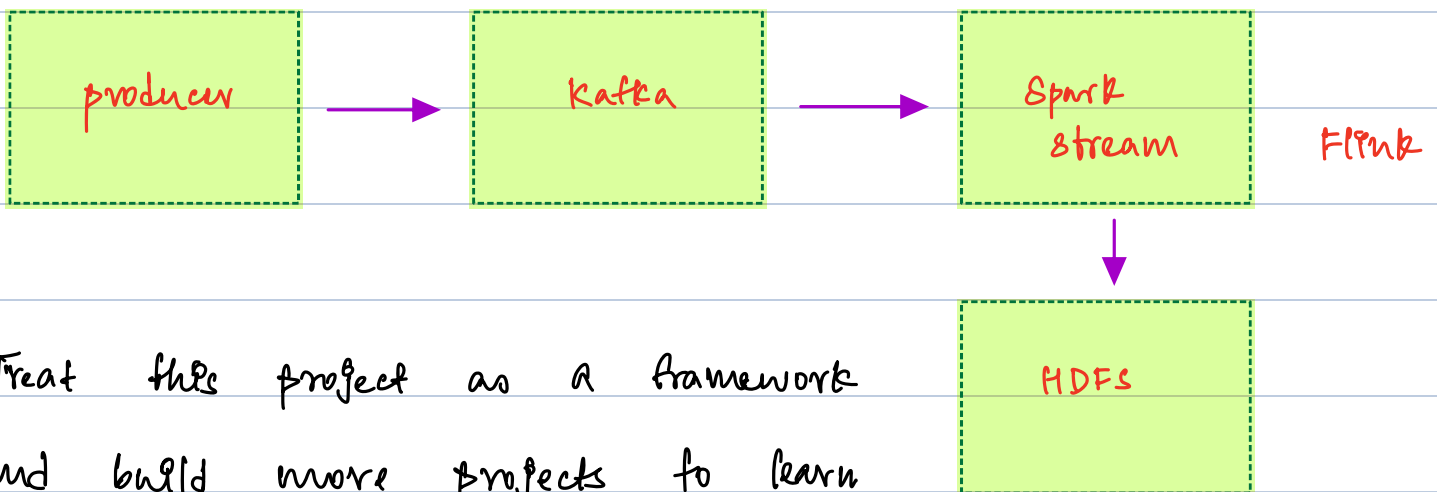

2. For each of the order, track order details. So that you can plan for logistics and you can add it to your data analysts

last mile delivery

Data Engineer → Project Description

- ① Process these streams of data and store them in a particular location
- ② Create a pipeline in such a way that you read the data placed on the DFS (distributed file system) you are able to analyze it.

components of pipeline

Treat this project as a framework and build more projects to learn new tech stack

Hive for analysts

Producer

For getting streaming data → Faker

Faker is a python module for creating realistic testing data

Datasets to Fake

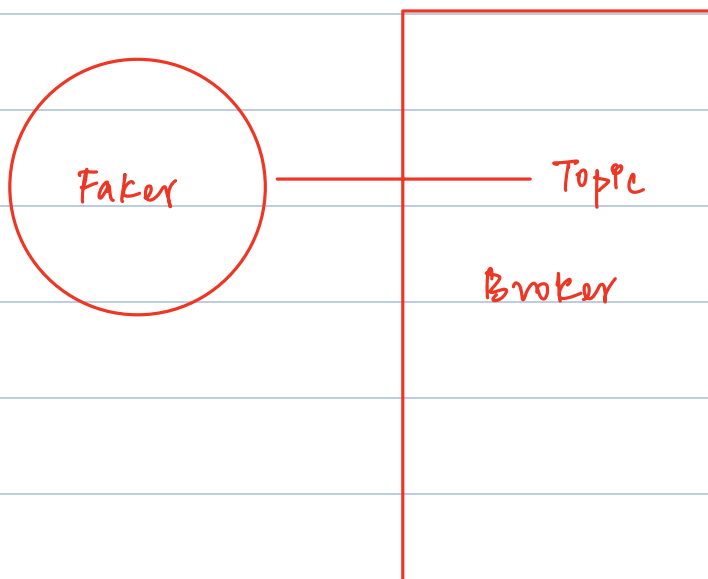

① user click

② order details

Integration with kafka

confluent kafka — created a python module around kafka installation

Topic, broker IP and port, producer

We need kafka
Broker details
create topics

Spark Stream Consumer

① User Events

Spark aggregation to handle the user click events

② Order Detail

Spark aggregation to handle the order details events

Dhruv's Request

Kindly practice the demo ❌
